

Dependencies for TestingUtilities Project

In order to use the Testing Project, the following dependencies should be placed in the “dependencies” directory”, or in the classpath:

1. Bouncy Castle JCE Provider (<http://www.bouncycastle.org>). We have tested against release 1.30 (bcprov-jdk15-130.jar), but they also should work with later releases.
2. Artima SuiteRunner Project (<http://www.artima.com/suiterunner/index.html>). We used the release 1.0-beta7 (suiterunner-1.0beta7.jar).
3. Cryptix Crypto JCE Provider (<http://www.ntua.gr/cryptix/products/jce/>). We have been testing with the release 1.3 (cryptix-jce-provider.jar).
4. JUnit Testing framework (<http://www.junit.org/index.htm>). We have been using the release 3.8.1 (junit.jar), but it is possible to run the testsuite with later releases also.
