Apache Stonehenge : .NET Utilities List

This page last changed on May 05, 2009 by bendewey.

The following is a list of utilities that may be useful when installing the .NET StockTrader Application. These utilities can be found in the setup_utilities/Util folder

Certificates

Filename	Description
BSLClient.pfx	This is the certificate for the Business Service
OPSHost.pfx	This is the certificate for the Order Processing Service
stocktraderpfxfile.pfx	This is the certificate for the Trade Web Client

Scripts

Filename	Description
installevents.cmd	Used to create an EventSource in the EventLog. *This is not currently used by the .NET StockTrader application, but may be used in the future.*
installevents64.cmd	Same as installevents.cmd for an x64 Environment
installnewevent.cmd	Used to create an EventSource in the EventLog. *This is not currently used by the .NET StockTrader application, but may be used in the future.*
installnewevent64.cmd	Same as installnewevent.cmd for an x64 Environment
runappcmd.cmd	This script is used to enable the WCF ports on the Trade Web Client
servicemodelreg.cmd	If you install ASP after .NET 3.5 you may need to run this script to setup the ASP.NET correctly to work with WCF
servicemodelreg64.cmd	Same as servicemodelreg.cmd for an x64 Environment

* These scripts are meant to be used as a guide. Users should be comfortable troubleshooting them on their own.

Misc

Filename	Description
SampleMakeCertificateWithPrivateKey_Commands.txt	This file contains the commands need to create the certificate. Use this as a guide if you need to create certificates for your own application.
