The Task Concept

Overview document

In Lenya CMS, a **task** is used to implement a process which can be invoked by the user. Tasks are triggered from the sitemap using a <u>TaskAction</u> (taskaction.html) or <u>scheduled</u> (scheduling.html) using a `TaskJob`.

Typical tasks are

- publishing a page,
- exporting a page to a live server,
- manipulating a file,
- sending an e-mail, or
- creating a backup of your site.
