

ZooKeeper 3.2.2 Release Notes

by

Table of contents

1 Changes Since ZooKeeper 3.2.1.....	2
--------------------------------------	---

These release notes include new developer and user facing incompatibilities, features, and major improvements.

Note that there is a user visible semantic change to an existing API in the 3.2.0 release: [ZOOKEEPER-444](#) "perms definition for PERMS_ALL differ in C and java", a bug fix which required a change to the JAVA definition of ALL to include ADMIN.

See [3.0 release notes and migration instructions](#) if you are upgrading from version 2 of ZooKeeper (SourceForge) to version 3 or later.

1. Changes Since ZooKeeper 3.2.1

Issue	Notes
Bug	
ZOOKEEPER-582	ZooKeeper can revert to old data when a snapshot is created outside of normal processing
ZOOKEEPER-562	c client can flood server with pings if tcp send queue filled
ZOOKEEPER-538	zookeeper.async causes python to segfault
ZOOKEEPER-547	Sanity check in QuorumCnxn Manager and quorum communication port.
ZOOKEEPER-420	build/test should not require install in zkpython
ZOOKEEPER-576	docs need to be updated for session moved exception and how to handle it
ZOOKEEPER-554	zkpython can segfault when statting a deleted node
ZOOKEEPER-541	zkpython limited to 256 handles
ZOOKEEPER-510	zkpython lumps all exceptions as IOError, needs specialized exceptions for KeeperException types
ZOOKEEPER-540	zkpython needs better tracking of handle validity
ZOOKEEPER-585	Update README for zkpython in 3.2.2
