- [Revolution] Working on the Link ResourceType Module, I kept finding bugs in Cocoon2.1.6, so I reinstalled/reorganized my development system with Cocoon2.1.9 and a fresh copy of Lenya1.3. Fixed some bugs with Hierarchical content while testing the new installation. Fixed Form Module's post.xsp to handle checkboxes (multiple fields with the same name). Added ResourceTransformer for changing structural information of Resources. Still being tested. Added StringSource and VirtualSourceFactory. The Cocoon project might benefit from them. VirtualSourceFactory needs to be thread-safe. - [1.0] The util.xsl now uses the PageEnvelope class the get most of its information. It could be cleaned up very much now. There are new tags that it'll recognize now. They are based on the naming for the URI scheme: xsp-lenya:context-prefix xsp-lenya:publication-id xsp-lenya:area xsp-lenya:document-id All the other stuff should be deprecated. [Diff](#) (<http://svn.apache.org/viewcvcs.cgi?rev=39460&view=rev>) (egli)
- [1.0] Added code to return the document-id. The algorithm to calculate the document-id is based on an assumption which doesn't necessarily hold true under all circumstances. - [1.0] Changed the interface of ParentChildCreatorInterface: The create method no longer takes a Parameter argument but a more general Map. This way the action can pass in arbitrary Objects to the create method and ultimately to the transformXML methods. The action now grabs all request, sitemap and session parameter and fills them into a map which is then passed along to the create method which hands it down to the transform method. This way the transform method can fill, e.g. the user (from the session) into a new document. [Diff](http://svn.apache.org/viewcvs.cgi?rev=38912&view=rev) (<http://svn.apache.org/viewcvs.cgi?rev=38912&view=rev>) (egli)

- [1.0] The transformation for the computerworld consists of simply adding the title to the article. There was some reference to a non-existing xpath which made the transformation not work. Fixed now. [Diff](http://svn.apache.org/viewcvs.cgi?rev=38906&view=rev) (<http://svn.apache.org/viewcvs.cgi?rev=38906&view=rev>) (egli)
- [1.0] The transformXML method signature has changed: We pass the parameters for childid, childname and childtype now directly and no longer via the parameters argument. [Diff](http://svn.apache.org/viewcvs.cgi?rev=38903&view=rev) (<http://svn.apache.org/viewcvs.cgi?rev=38903&view=rev>) (egli)
- [1.0] File.separator fixed [Diff](http://svn.apache.org/viewcvs.cgi?rev=38900&view=rev) (<http://svn.apache.org/viewcvs.cgi?rev=38900&view=rev>) (michi)

- [1.0] The creator hierarchy has been refactored. There is one default class (DefaultCreator) which implements the interface and implements the standard behaviour. [Diff](http://svn.apache.org/viewcvs.cgi?rev=38897&view=rev) (<http://svn.apache.org/viewcvs.cgi?rev=38897&view=rev>) (egli)
- [1.0] The creator hierarchy has been refactored. 1. There is now an interface (ParentChildCreatorInterface) which defines how creators can be invoked. 2. There is one default class (DefaultCreator) which implements the interface and implements the standard behaviour. It uses the template pattern, e.g. the create method basically just reads the template file invokes an (empty) transform method on the DOM node and finally writes it back. So subclasses can specify a transform method e.g. replace the title with the childName etc. 3. All classes make use of this and are therefore much smaller. 4. The create method now takes an additional argument 'parameters' which can be used to pass arbitrary arguments. This arg is passed to the transform method where it could be used to read things like the current user, etc. [Diff](http://svn.apache.org/viewcvs.cgi?rev=38896&view=rev) (<http://svn.apache.org/viewcvs.cgi?rev=38896&view=rev>) (egli)
