## 1. Getting Started and Building Lenya

### 1.1. The build fails with a message like Fatal error during transformation.

You might want to take a look at the comments for [bug 40113](http://issues.apache.org/bugzilla/show_bug.cgi?id=40113) ( [http://issues.apache.org/bugzilla/show\\_bug.cgi?id=40113](http://issues.apache.org/bugzilla/show_bug.cgi?id=40113)) .

### 1.2. When I request the web application, I get the error message "Failure occurred during job recovery".

Please verify that the user which runs the application server has write permissions in the directory `$WEBAPP_HOME/WEB-INF/db/`.

## 2. Building Websites

### 2.1. How do I add a custom type of documents?

See section [resource types](http://../docs/2_0_x/reference/resource-types.html) ( [../docs/2\\_0\\_x/reference/resource-types.html](http://../docs/2_0_x/reference/resource-types.html)) .

### 2.2. How can I add user interaction to web pages?

The [usecasedocument](http://../docs/2_0_x/./modules/usecasedocument/index.html) ( [../docs/2\\_0\\_x/./modules/usecasedocument/index.html](http://../docs/2_0_x/./modules/usecasedocument/index.html)) module allows to add usecases as CMS documents.

## 3. Internationalisation (i18n)

### 3.1. How to extend the i18n catalog for Lenya 2.0?

In the default publication you can find `pubs/default/lenya/resources/i18n`. That are the files you need to edit if you wish to override it on a publication base.

However you can as well extend the catalog with modules, that you can reuse in different publications. You need to add at least `modules/{yourModule}/lenya/resources/i18n/cmsui.xml`. Don't forget to declare the module in `publication.xml` so that the i18n catalog is detected.

## 4. Editors

### 4.1. Is it possible to override in BXE *only* a css style definition?

Yes, this is possible.

Just add and edit it like you need it (have a look in the default pub): `{pubid}/resources/misc/bxe/{ressourcetype}-bx.css`

## **5. Deployment**

### **5.1. Can I serve my public site with Cocoon only?**

In general, the answer is "no", because various Lenya components are necessary to access the repository and generate the pages. You'd have to invest a lot of effort to extract these components from Lenya, and this will hardly be worth it.
