lenya-document: Protocol

The `lenya-document:` protocol allows to access the source of a Lenya document **by its UUID, publication ID, area, language and revision**, regardless of the sitetree layout. All Lenya-internal links use it, so that links will not break when documents are moved around in the sitetree.
Since it is such a fundamental concept, it is documented in detail under [Link Management](../../../../ docs/2_0_x/reference/link-management.html) .
