

The FCKeditor Module

Table of contents

1 Installation.....	2
---------------------	---

1 Installation

1. Download the 2.4.3 release of FCKEditor from the [FCKEditor homepage](http://www.fckeditor.net) (<http://www.fckeditor.net>) .
2. Unzip it into the `src/modules/fckeditor/resources` directory. The resources directory should now contain a directory named `fckeditor`.
3. Register the module with your publication, so that the appropriate menu item can be displayed. In the `<modules>` section of `$PUB_HOME/config/publication.xml`, add the line

```
<module name="fckeditor"/>
```

4. Make sure you have the appropriate usecase policies in `$PUB_HOME/config/ac/usecase-policies.xml` (or use the usecases option under the admin tab in Lenya). The following entry will allow the "admin" and "edit" roles access to the usecase:

```
<usecase id="fckeditor.edit">  
  <role id="admin" method="grant"/>  
  <role id="edit" method="grant"/>  
</usecase>
```

5. Build Lenya.
6. Edit your document by clicking on "With FCKEditor" in the "Edit" menu.
