- [2.0] create continuations for usecase uri views (to make them consistent with jxtemplate views) uri views (i.e. views defined with <view uri="..." .../> in the usecase.xconf) used to be one-shot cocoon.sendPage beasts. no continuation was created for them, as opposed to <view template="..." .../> usecases, for which the usecase framework would call cocoon.sendPageAndWait. this meant that the mechanism of the view fundamentally affected the behaviour of the controller, which is simply wrong in an MVC context. currently, only three usecases in trunk are affected by this change: * bxe.open * bxe.close * jcrsource.export the bxe stuff works as ever, but iiuc a stale

continuation will be created and the usecase will never execute and finish. that is no problem, since the continuation will eventually time out, but it should be fixed at some point. i could not test the behaviour of the jcrsource module.
