## 1 Download

Apache Nutch 2.2.1 (src-tar and src-zip only) and 1.7 (src-tar, src-zip, bin-tar and bin-zip) are now available. See the [CHANGES-2.2.1.txt](#), and [CHANGES-1.7.txt](#) files for more information on the list of updates in these releases.

All Apache Nutch distributions is distributed under the [Apache License, version 2.0](#).

The link in the Mirrors column below should display a list of available mirrors with a default selection based on your inferred location. If you do not see that page, try a different browser.

The checksum and signature are links to the originals on the main distribution server.

## 2 Verify Releases

It is essential that you verify the integrity of the downloaded files using the PGP or MD5 signatures. Please read [Verifying Apache HTTP Server Releases](#) for more information on why you should verify our releases. We strongly recommend you verify your downloads with ASC, MD5 and SHA signatures.

### PGP Signature

The PGP signatures can be verified using PGP or GPG. First download the [KEYS](#) as well as the asc signature file for the relevant distribution. Make sure you get these files from the [main distribution directory](#), rather than from a mirror. Then verify the signatures using

```
$ gpg --import KEYS
$ gpg --verify apache-nutch-X.Y.Z
```

The files in Apache Nutch 2.2.1 and 1.8 releases are signed by Lewis John McGibney (lewismc) 4E21557F and 48BAEBF6 respectively.

### MD5 Signature

Alternatively, you can verify the MD5 signature on the files. A unix program called md5 or md5sum is included in many unix distributions.

```
$ md5sum apache-nutch-X.Y.Z
```

```
... output should match the string in apache-nutch-X.Y.Z
```

### 3 Previous Releases

If you are looking for previous releases of Apache Nutch, have a look in the [old downloads](#) page, or alternatively for even older releases check out the [Incubator archives](#).
