The Virtual Library in Detail	17

Chapter

Tapestry and J2EE

he Primix Virtual Library is a full-fledged demostration of Tapestry and of Tapestry interacting with Enterprise JavaBeans. It is based on an actual application developed internally at Primix; the idea being to provide an application that allows everyone at the company to share their books. A database stores information about the users of the application and the books they own and are borrowing from other users.

Users should be able to connect to the application and begin using it immediately to search for books. If they want to borrow books they must first log in (possibly, registering themselves on the fly).

The goal was to have a useful, streamlined system that could be used internally at Primix *and* to serve as a demonstration of the full power of Tapestry.

The application consists of two modules: VlibBeans which contains the entity and session beans for the application, and Vlib, which contains the Tapestry user interface for the application.

The Virtual Library requires an application server to host the EJBs. This demonstration works around the open-source jBoss application server, available from <u>http://www.jboss.org/</u>.

The Tapestry portion of the application requires a servlet container. The Tapestry distribution ships with a copy of the Jetty HTTP Servlet server, which is also open source. More information on Jetty is available at <u>http://www.mortbay.com/</u>. The Virtual Library is pre-configured to work with Jetty.

Finally, all development has been under Windows NT and Windows 2000. We have not yet had a chance to setup under Linux or Solaris.

Chapter

Setting up the Application

he Tapestry distribution includes pre-compiled copies of the Virtual Library components, as well as the source code and the tools to recompile the source.

Install jBoss

jBoss is not distributed with Tapestry (it's a 4 MB download), but is available from http://www.jboss.org or http://sourceforge.net/projects/jboss. At the time of this writing, the current version of jBoss was 2.2.1.

jBoss is exceptionally easy to setup, simply unpack the distribution (jBoss-2.2.1.zip) to a directory, do some minor configuration (see next section) and its ready to go.

Configure jBoss

Configuring jBoss is easy, as long as you've set up the JBE first. **Important:** You should have JDK 1.3 installed, and have the JBE configured to use it. The Virtual Library EJBs are configured such that the server and client must both be running JDK 1.3.

You must edit your config/LocalConfig.mk, adding a definition for JBOSS_DIR, which will identify the directory you installed jBoss into (typically, C:/JBoss-2.2.1).

Change to the VlibBeans directory (which should be C:\Tapestry-x.x.x\examples\VlibBeans).

Execute the command make configure-jboss:

```
C:\Tapestry-0.2.10\examples\VlibBeans>make configure-jboss
*** Installing Primix Vlib database ... ***
*** Splicing changes to jboss.jcml ... ***
```

```
*** Setting up JNDI properties ... ***
*** Copying runtime libraries ... ***
*** jBoss is ready to run ***
C:\Tapestry-0.2.10\examples\VlibBeans>
```

This executes a series of commands that sets up an example copy of the Primix Virtual Library database and changes the jBoss configuration to recognize it (it edits the jboss.jcml file). It also sets up JNDI properties and copies com.primix.tapestry.jar into the jBoss lib/ext directory.

The Primix Virtual Library database is an InstantDB database. Running make configurejboss again will overwrite the database with a fresh copy.

Start jBoss

Next, start up jBoss with the command make run. This will build the VlibBeans.jar file, deploy it, and start up jBoss.

```
C:\Tapestry-0.2.10\examples\VlibBeans>make run
*** Cataloging package com.primix.vlib.ejb ... ***
*** Compiling ... ***

Page Home

The current version of the Primix Virtual Library is simple, presentation wise. We will shortly be sprucing it up with graphics and colors.

Across the top are several navigation options. The Home link returns the user to this search page. The My Books links is activated once a user logs in; it shows the list of books owned by the user. The Login link allows a user to log into the system, or register on the fly. The logout allows the user to exit the system.

Let's start by finding all the O'Reilly books in the database.

Select "O'Reilly" in the Publisher pulldown, then click the Search button.

You'll get a list of all the books, sorted by title.
