# Prepared Questions

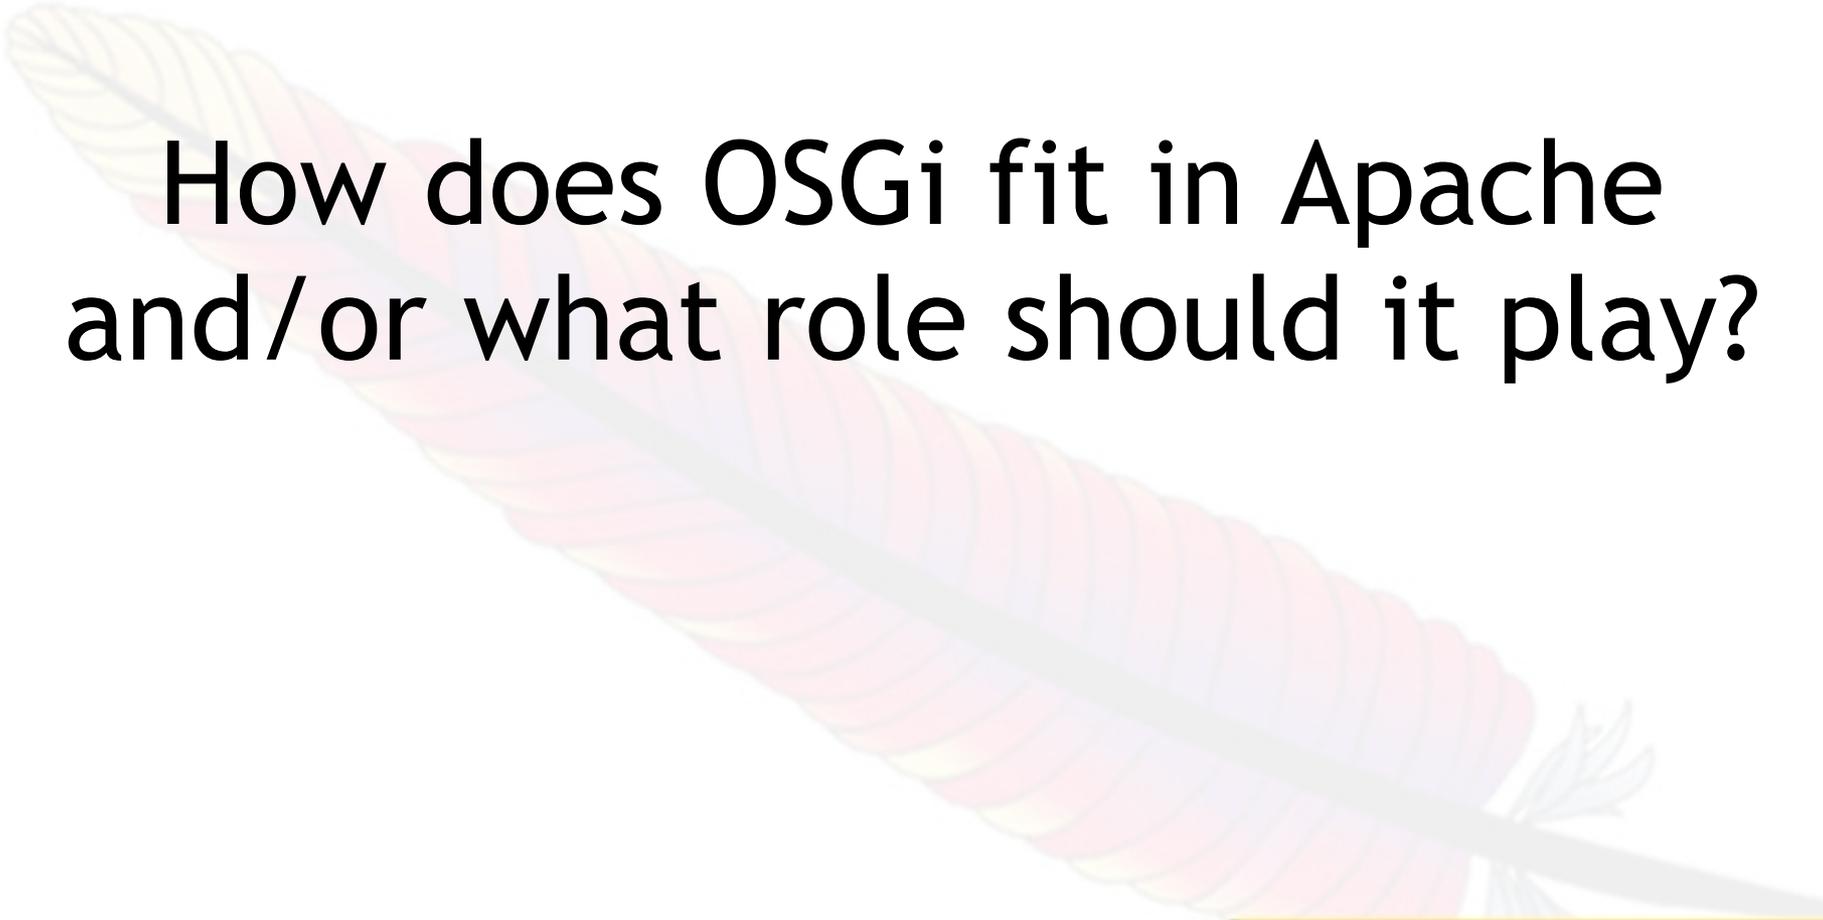

# OSGi licensing and open source? Are they compatible?

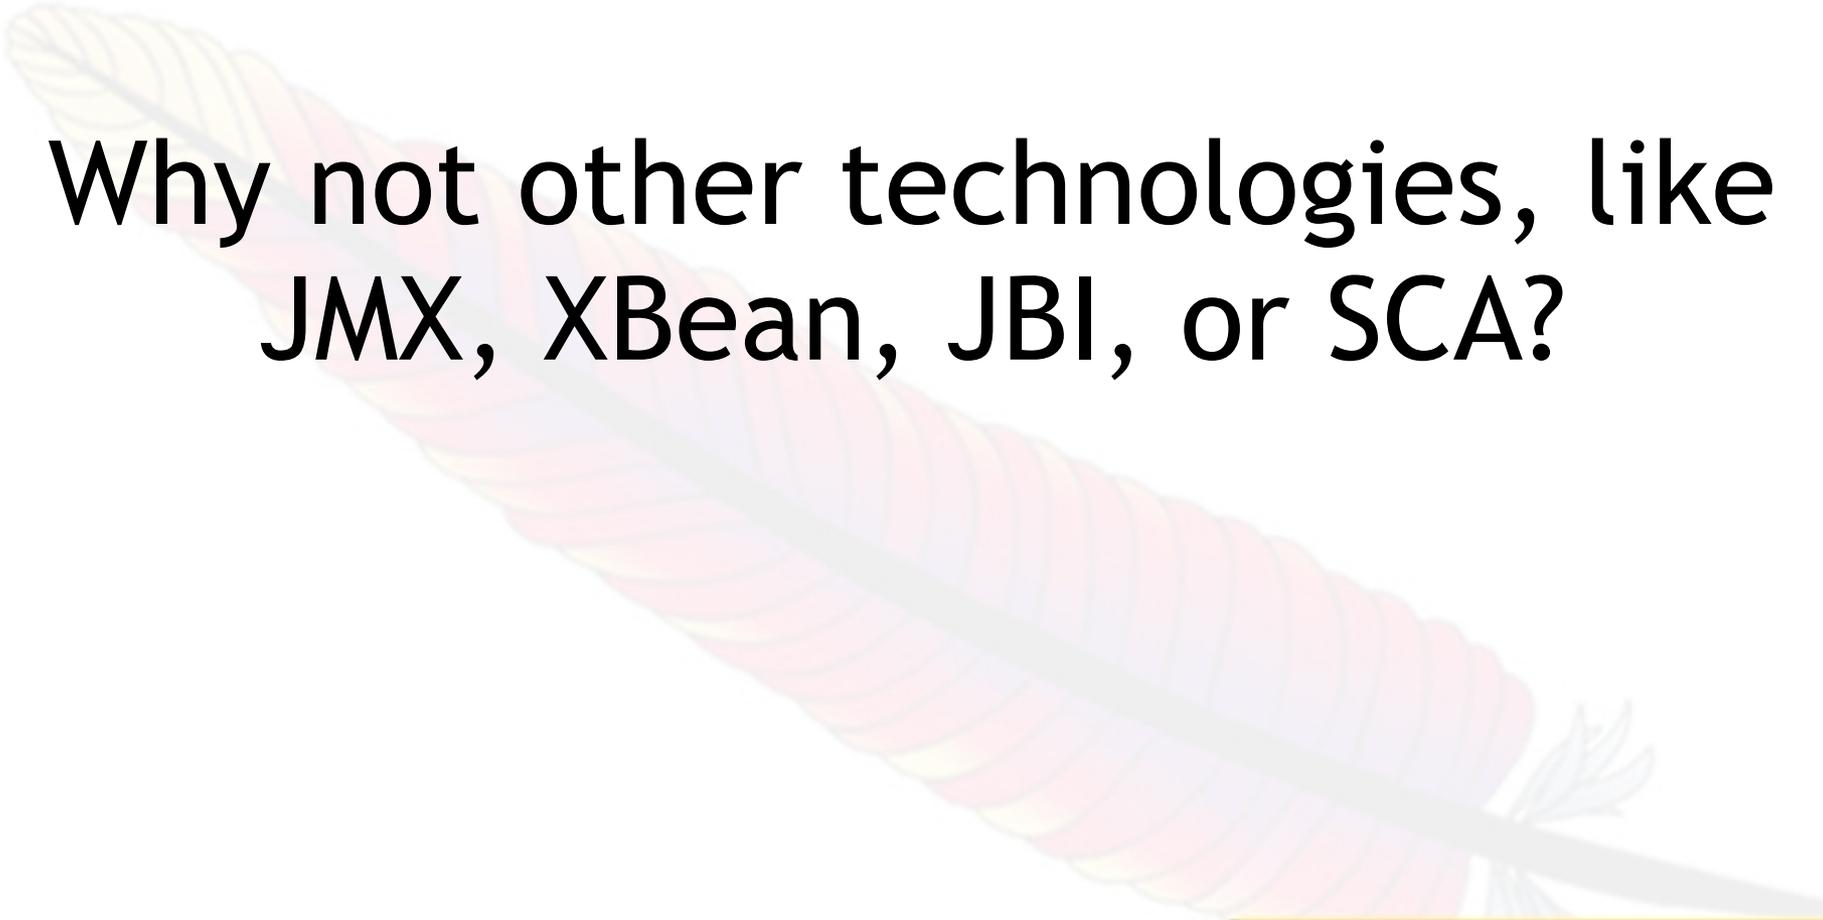

Is there an OSGi TCK?  
Is the TCK available?  
Is it open source?

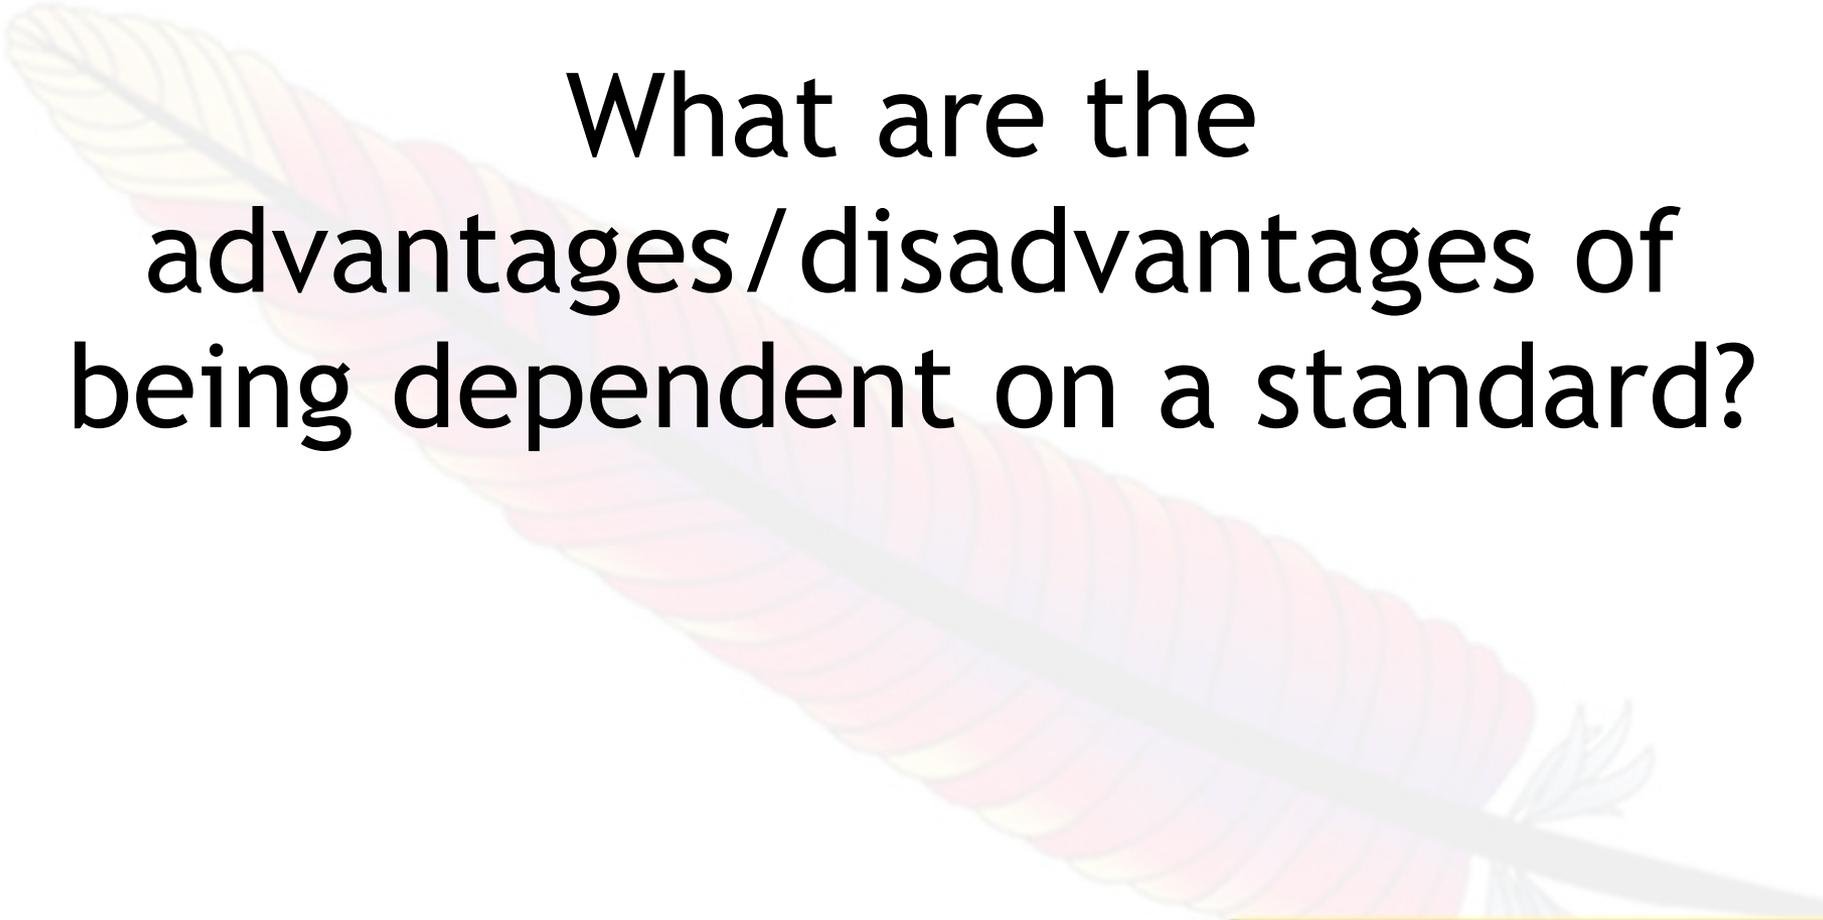

How can Apache influence the specifications or participate in the OSGi Alliance?

How does OSGi fit in Apache  
and/or what role should it play?

Why not other technologies, like  
JMX, XBean, JBI, or SCA?

What are the  
advantages/disadvantages of  
being dependent on a standard?

Where should OSGi technology  
go from here?

Where should OSGi technology  
have never gone in the first  
place (i.e., what are its  
mistakes)?

Where should the OSGi Alliance go from here (e.g., in defining a relationship to the open source community or the Java Community Process)?
