

ROLLER: AN OPEN SOURCE BLOGGING PLATFORM

Dave Johnson

Staff Engineer S/W

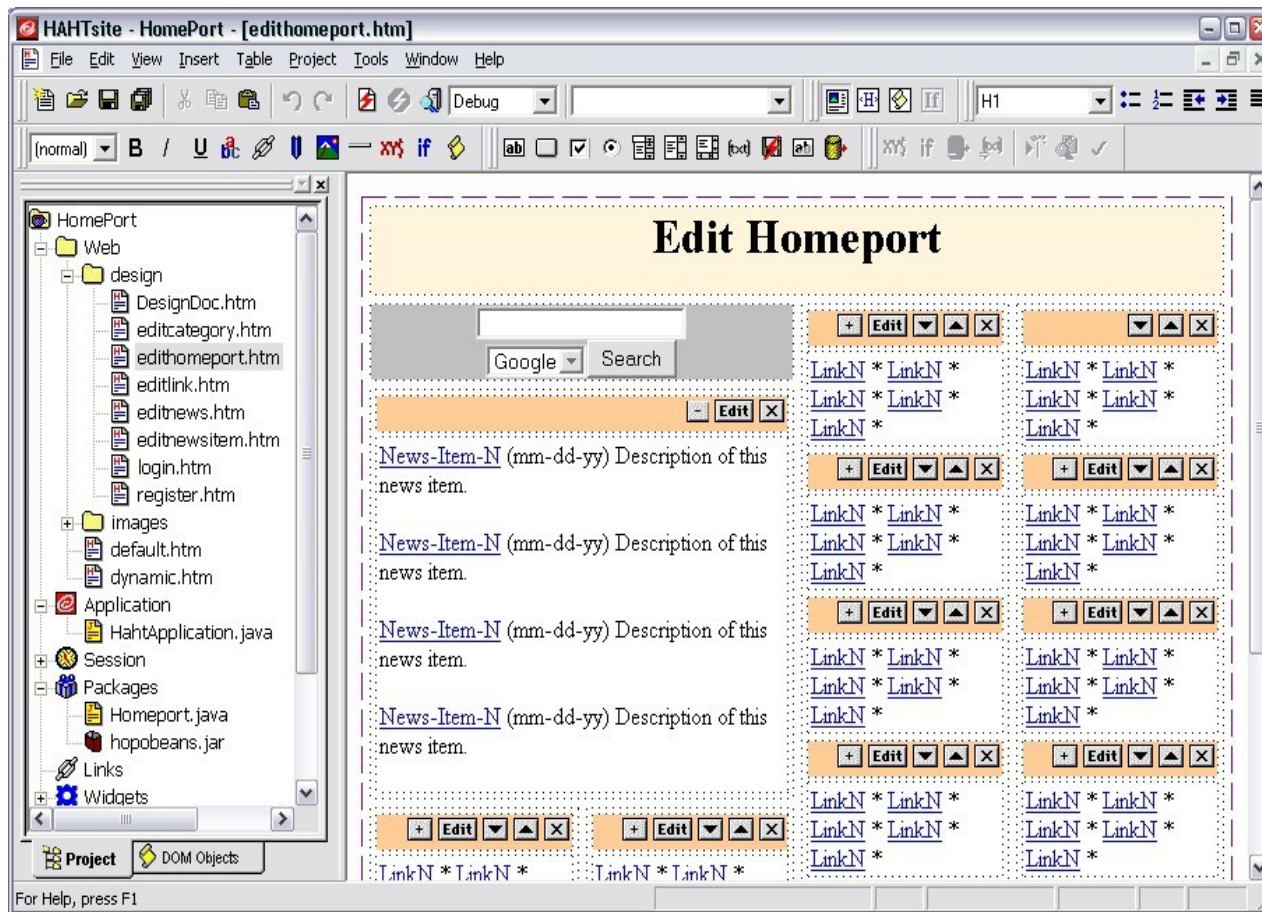

Sun Microsystems, Inc.

Agenda

- **Roller history**
- Roller features
- Roller community
- Roller internals: backend
- Roller internals: frontend
- Customizing Roller
- Roller futures

Roller started as an EJB example...

- Homeport – a home page / portal (2001)

... became an O'Reilly article

- Ditched EJBs and HAHTsite IDE (2002)
- Used all open source tools instead and thus...

Published on [ONJava.com](http://www.onjava.com/) (<http://www.onjava.com/>)

[See this](#) if you're having trouble printing code examples

Building an Open Source J2EE Weblogger

by [David Johnson](#)
04/17/2002

As a Java developer, you should be aware of the tremendous wealth of open source development software that is available for your use -- even if you have no desire to release any of your own software as open source. In this article, I will introduce you to some of the most useful open source Java development tools by showing you how I used these tools to develop a complete database-driven Web application called Roller.

... and escaped into the wild

FREE ROLLER

I am allowing others to use my installation of **Roller** for their weblogging. Hopefully this will provide a means for enhancing the Roller user base as well as provide a nice environment for communication and expression.

Anthony Eden
August 8, 2002

... and found a new home at Apache

- Apache Roller (incubating)
 - > Incubation period: June 2005 - ???

Agenda

- Roller history
- **Roller features**
- Roller community
- Roller internals: backend
- Roller internals: frontend
- Customizing Roller
- Roller futures

Roller features: standard blog stuff

- Individual and group blogs
- Hierarchical categories
- Comments, trackbacks and referrers
- File -upload and Podcasting support
- User editable page templates
- RSS and Atom feeds
- Blog client support (Blogger / MetaWeblog API)
- Built-in search engine

[Style] [Font] [Size]

B **I** **U**     

It's been a while since my last status, CC:World post, so here's an update on the things I'm working on these days.

RSS and Atom in Action. Because I added those two new chapters on [Windows RSS](#) and [ROME](#), Manning had to renumber about 3/4 of the book. That took a bit longer than expected, but now the work is done and I've got the whole book in one big PDF file. I'll do one final review this weekend and, if we can quickly wrap up the loose ends and the index, we'll be off to the printers before the end of June.

Blog client support

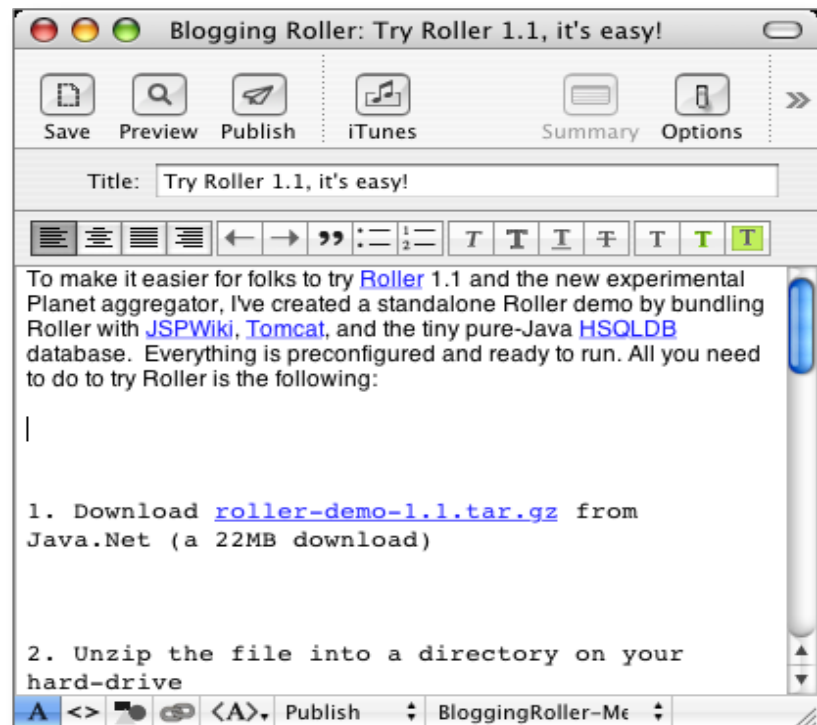

- XML-RPC based Blogger and MetaWeblog API
- Lots of blog clients work with Roller, for example:

ecto

<http://ecto.kung-foo.tv>

For Mac OSX and Windows

Multiple blogs per user

logged in as **roller**
rollerweblogger.org | Main Menu | Logout

Main Menu

Select a weblog to edit, manage, or configure.

Blogging Roller

Link	http://rollerweblogger.org/page/roller	 New Entry  Edit Entries  Settings
Permission	ADMIN	
Description	Dave Johnson on blogging, open source and Java	

Roller Weblogger Project

Link	http://rollerweblogger.org/page/project	 New Entry  Edit Entries  Settings  Resign
Permission	ADMIN	
Description	Roller Weblogger project blog	

Actions

Create new weblog

Feel like you've got more to say? Maybe another weblog is what you need.

Edit user profile

Change password, contact info, select language.

Server administration

Make site-wide administration changes.

Planet administration

Manage the planet aggregator. Add feeds, organize groups, set configs.

Multiple users per blog

logged in as **roller** - editing weblog **project**
rollerweblogger.org | [Main Menu](#) | [Logout](#)

Weblog Member Permissions

Create & Edit

Preferences

[Settings](#) | [Theme](#) | [Templates](#) | **[Members](#)** | [Pings](#) | [Custom Ping Targets](#) | [Maintenance](#)

Manage permissions of users in weblog **project**

You can change permissions of weblog members, or remove them from the weblog entire using the controls in the table below and clicking Save to commit your changes. Note that you are not allowed to demote or remove yourself from the weblog.

Username	Admin	Author	Limited	Remove
 project	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
 roller	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Save

Actions

 **Invite new member**
Invite somebody to help you write your weblog.

What are permissions?

Admin permission allows user to post entries, manage weblog and its users

Author permission allows user to post entries, but not to manage weblog

Limited permission allows user to save draft entries only

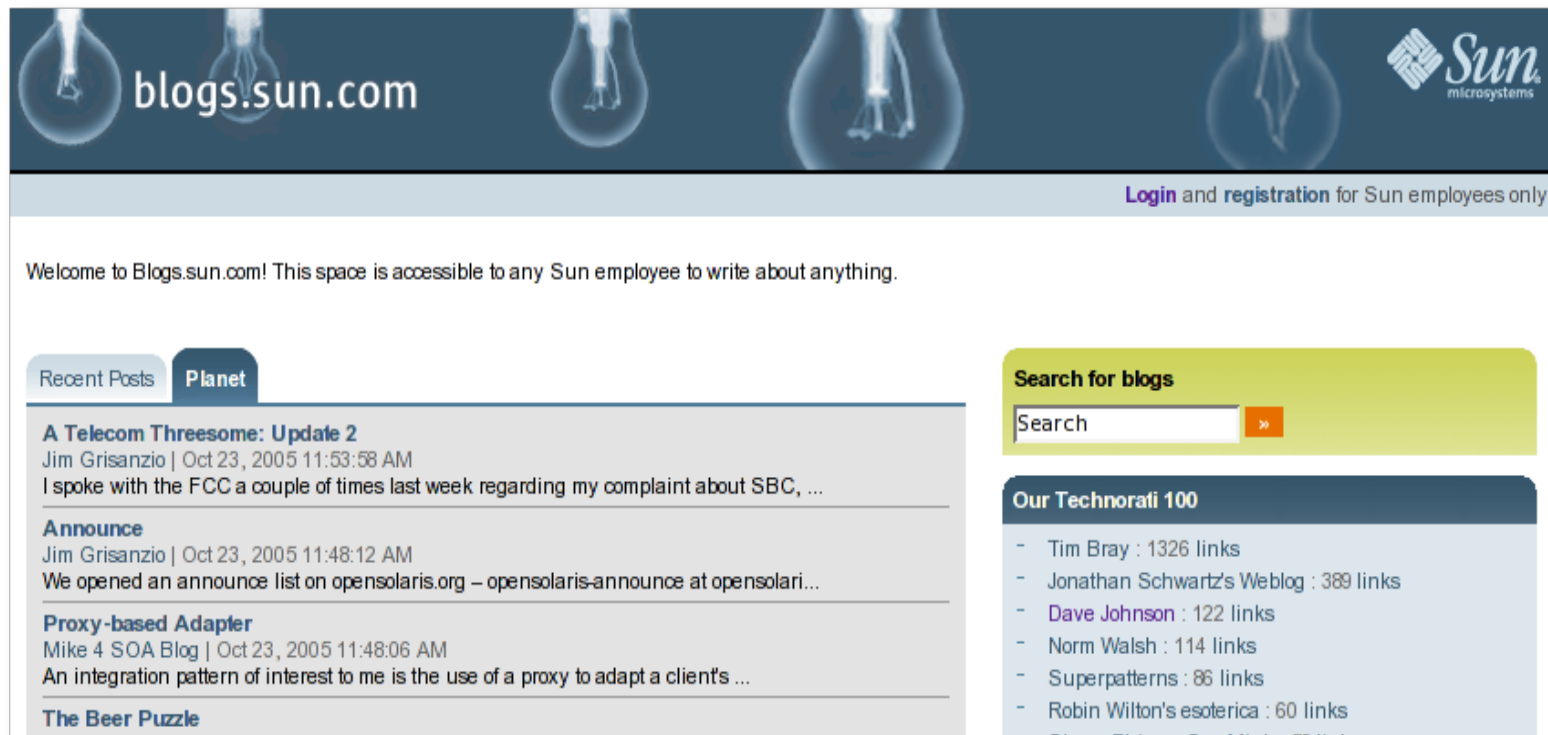

Powered by [Roller Weblogger 2.3-incubating](#) | [Report an Issue](#) | [User Guide](#) | [Macros](#) | [Mailing Lists](#)

Roller features: conversation support

- Get feedback via **comments** and **trackbacks**
 - > Enable / disable them at entry, blog and site-wide levels
 - > Email notification of new comments and trackbacks
 - > Comment moderation for both
- Talk back by sending **pings** and trackbacks
 - > Send trackbacks to blog posts that you're writing about
 - > Ping any set of Weblogs.com compatible services
- Promote your favorite web sites on your **blogroll**
 - > Bookmark management with OPML import and export
- See where today's hits are coming from
 - > Display of days **referrers** and referrer hit counts

Planet-style community aggregator

- To include local and off-site blogs on front page

Roller features: developer features

- Web services support
 - > Blogger and MetaWeblog API (XML-RPC based)
 - > IETF Atom Publishing Protocol (draft 8)
 - > Roller Administration Protocol (REST based)
- Themes
 - > Add your own blog themes
 - > Enable / disable user editing of themes
- Plug-ins allow you to:
 - > Hook into to entry rendering process (e.g. allow wiki syntax)
 - > Provide alternative comment authenticators (e.g. CAPCHA)
 - > Provide alternative persistence providers (e.g. JDO, JPA)

Limitations

- Relatively small community compared to Wordpress
 - > Small number of plug-ins and themes
- Java dependency limits ISP options
 - > A good and Java-smart ISP can be hard to find
- Clustering requires some custom development
 - > At BSC, we use **memcached** and our own search engine
- SSO requires some custom development
 - > NSCU, Yale and others have done it

Why choose Roller?

- Proven full-featured blogging solution for big sites
 - > Sun, IBM and others depend on it for corporate blogging
- Standard Java web application architecture
- Open source and Apache licensed
- Active and growing community at Apache

Agenda

- Roller history
- Roller features
- **Roller community**
- Roller internals: backend
- Roller internals: frontend
- Customizing Roller
- Roller futures

What is the Roller community?

- The developers who write the code?
 - > Seven *committers* design, develop, test and release the code
- The system admins who build and run the sites?
 - > Big sites: JRoller, blogs.sun.com, IBM devWorks, Yale, NCSU
 - > Tens and perhaps hundreds of sites using Roller
- The bloggers who use the software?
 - > Thousands and perhaps tens of thousands of active bloggers
- A: all of the above

Roller community processes

- Challenges
 - > Part of community needs to move fast (monthly releases)
 - > Moving too fast can scare away new contributors
- Need a flexible monthly release cycle
- Need transparent planning
 - > To encourage contributors, enable collaboration
 - > Plus, it's the open source way...

Roller release cycle

- Plan allows monthly releases, but doesn't mandate
 - > Second to last Thursday of month is RC day
 - > Committers: think we need a month release?
 - > Then create an RC on RC day and call for week of testing
 - > Last Thursday of month is release day
 - > Optionally: create release branch in SVN
 - > Create another RC and if confident: call for release vote
 - > Once released, create a SVN tag
 - > Rhythm can help us sync with new contributors

Roller planning process: features

- **Want to add a feature?**
- Write a proposal on the wiki
- Coordinate with folks writing other similar proposals
- Introduce proposal on dev list, call for feedback
- Tweak proposal, get consensus
- Do the work
- Submit patch or commit code to appropriate branch

Roller planning process: releases

- **Want to make a release?**
- Write a proposal on the wiki
 - > Reference all JIRA issues to be addressed
 - > Reference all feature proposals to be included
- Tweak proposal, get consensus
- Do the work
- Follow the release cycle: on RC day, create an RC

Great, so why is Roller still incubating?

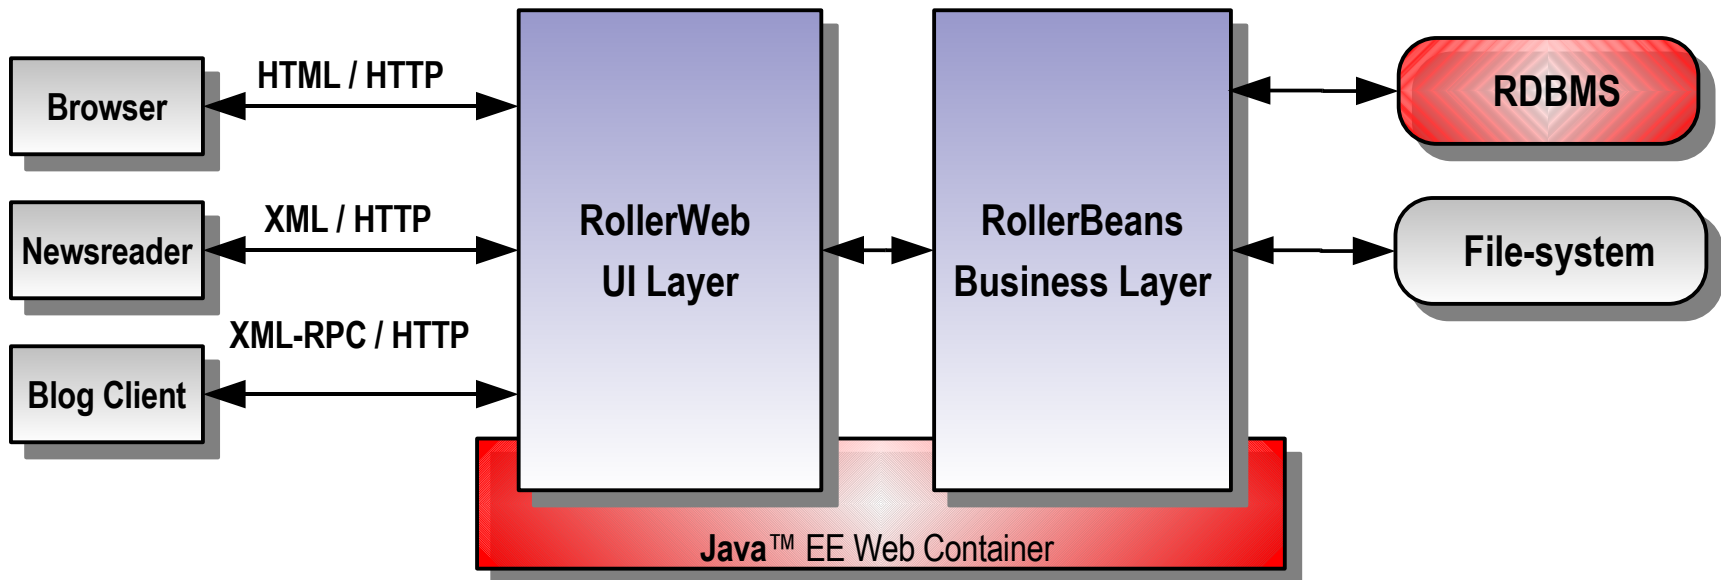

- ✔ Contributor agreements and grants
- ✔ Apache license headers
- ✔ Use Apache package names
- ✔ Migrate infrastructure
 - ✔ Source code and mailing lists
 - 🕒 Blog, wiki and bug tracker (post graduation?)
- ✔ Diverse and growing community
- ✔ Team follows the “Apache way”
- ⚠ Do ??? about LGPL dependencies

Agenda

- Roller history
- Roller features
- Roller community
- **Roller internals: backend**
- Roller internals: frontend
- Customizing Roller
- Roller futures

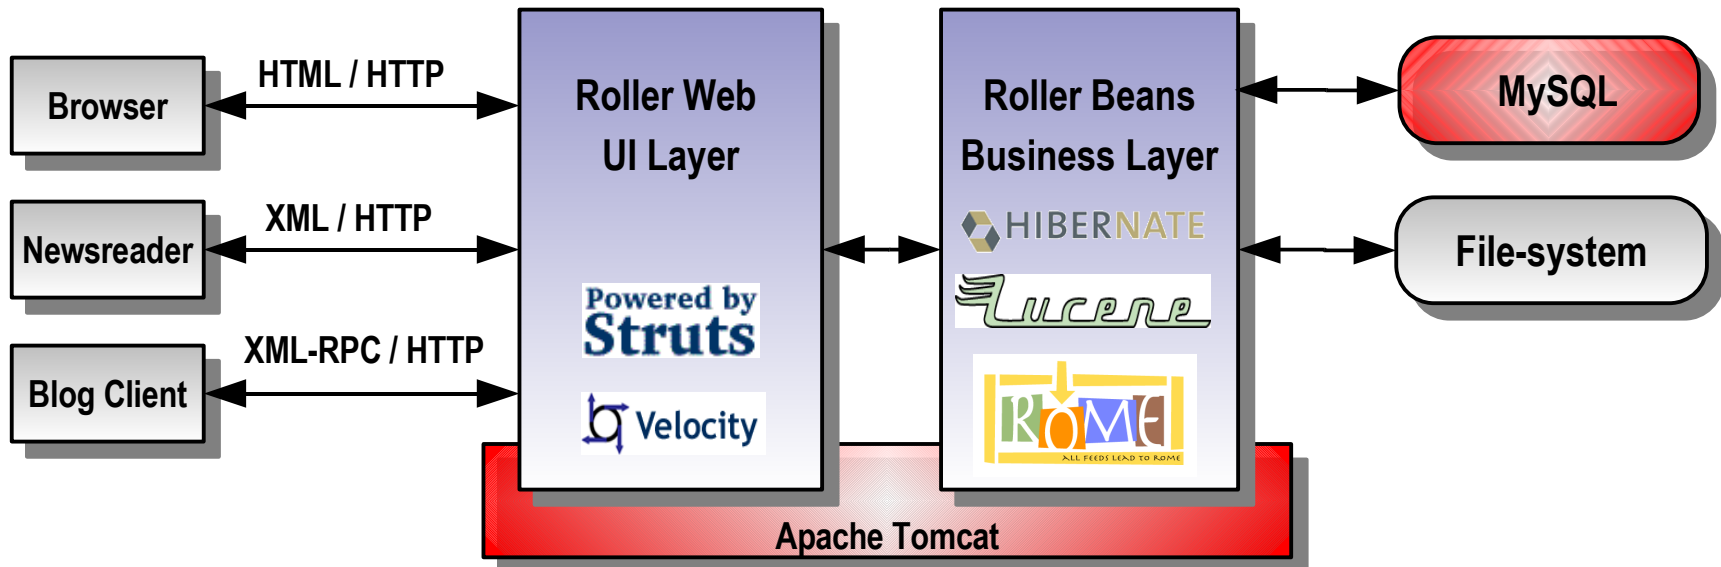

Enterprisey level architecture

- Web UI via Java™ Servlets and JSP
 - > Front controller, Web MVC and open session in view patterns
- Persistence via Java™ Database Connectivity
 - > Factory, facade and data mapper patterns

Java geek level architecture

- Roller Web: Web and UI layer
 - > Editor UI via **Struts and JSP**, blog and feed rendering via **Velocity**
 - > Feed parsing via **ROME**, Blogger API via **Apache XML-RPC**
- Roller Beans: Business and persistence layer
 - > **Hibernate** for DBMS, **Lucene** for search and file-system for uploads

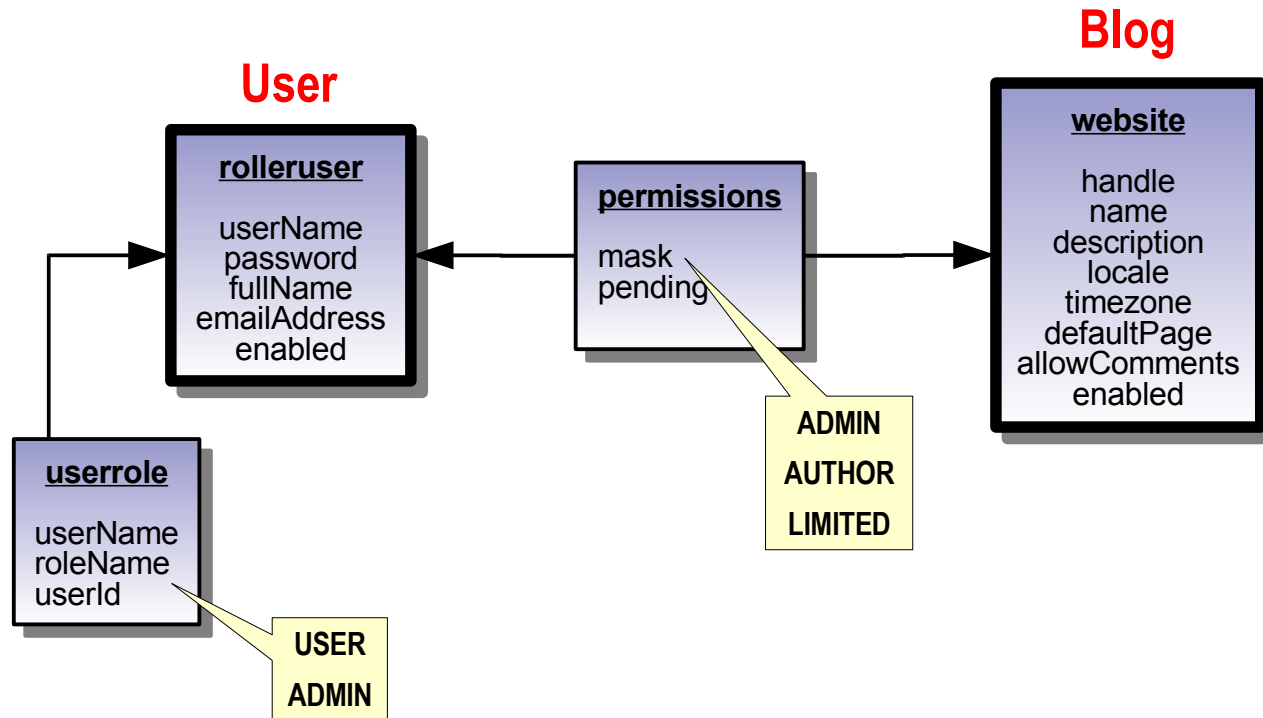

First, let's talk business

- Business layer is made up of:
 - > Plain old **Java objects**
 - > i.e. POJOs
 - > Interfaces that create, retrieve, update and delete
 - > i.e. **Manager interfaces** that do CRUD of POJOs

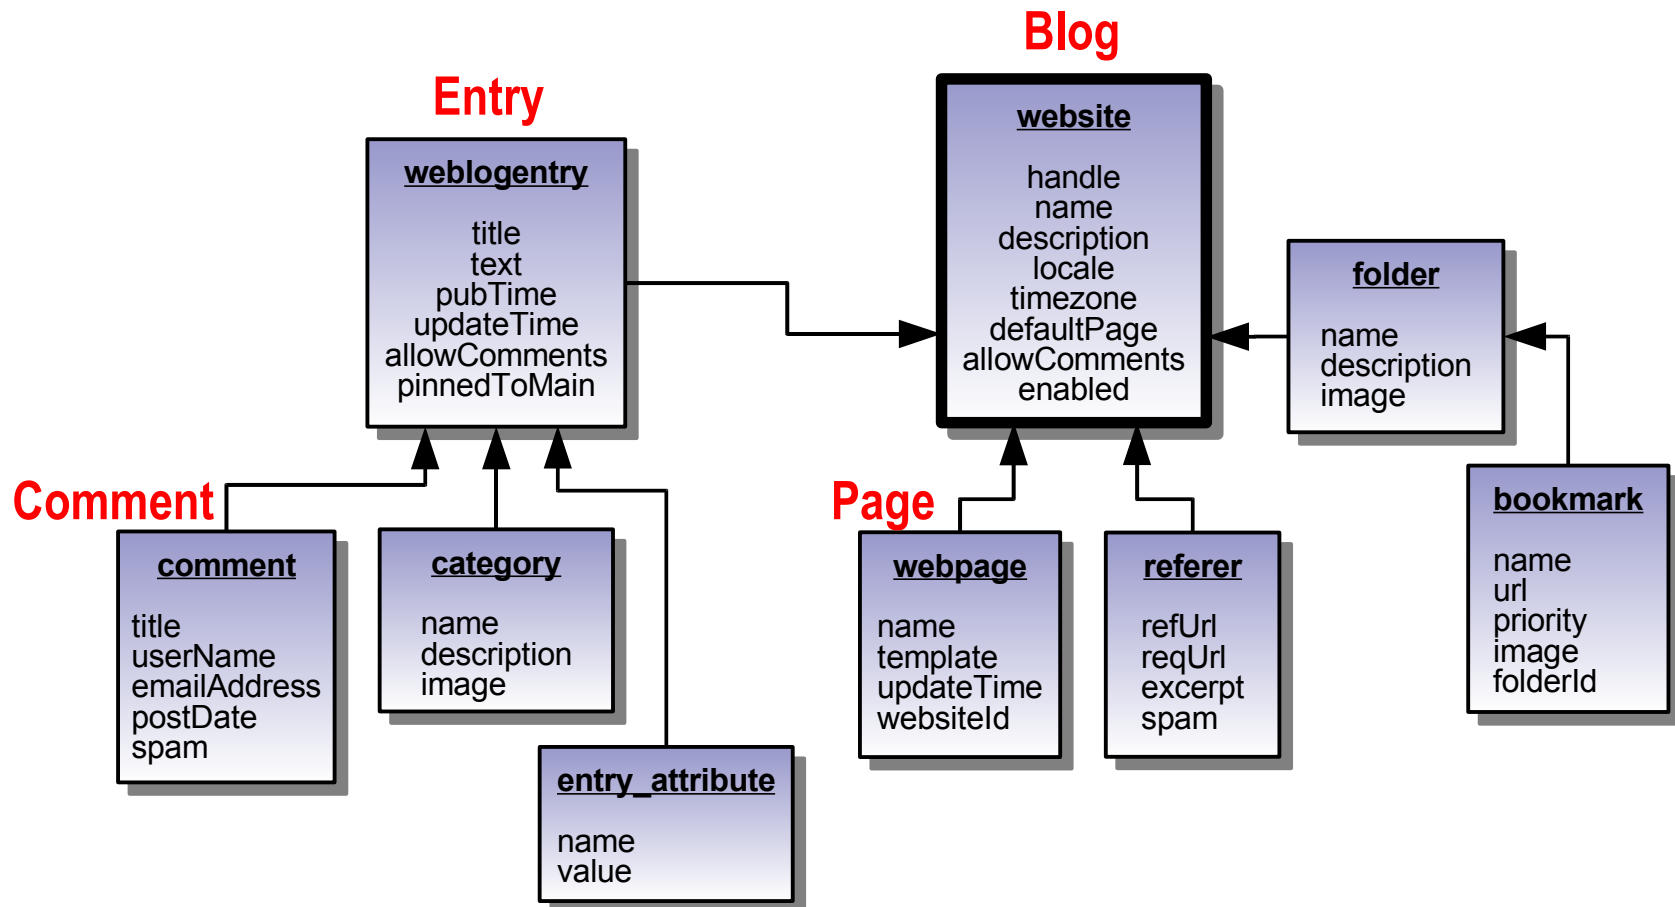

Roller POJOs: users and blogs

- User has global role
- User has permissions in blogs

Roller POJOs: blogs and entries

- A blog has entries, pages and comments

Roller POJO markup

```

/** @hibernate.class table="website"
 *  @struts.form include-all="true"
 */
public class WebsiteData extends org.roller.pojos.PersistentObject
    implements java.io.Serializable {

    /**
     * @hibernate.property column="description"
     *     non-null="false" unique="false"
     * @roller.wrapPojoMethod type="simple"
     */
    public String getDescription() {
        return this.description;
    }
    public void setDescription(String description) {
        this.description = description;
    }
    ...

```

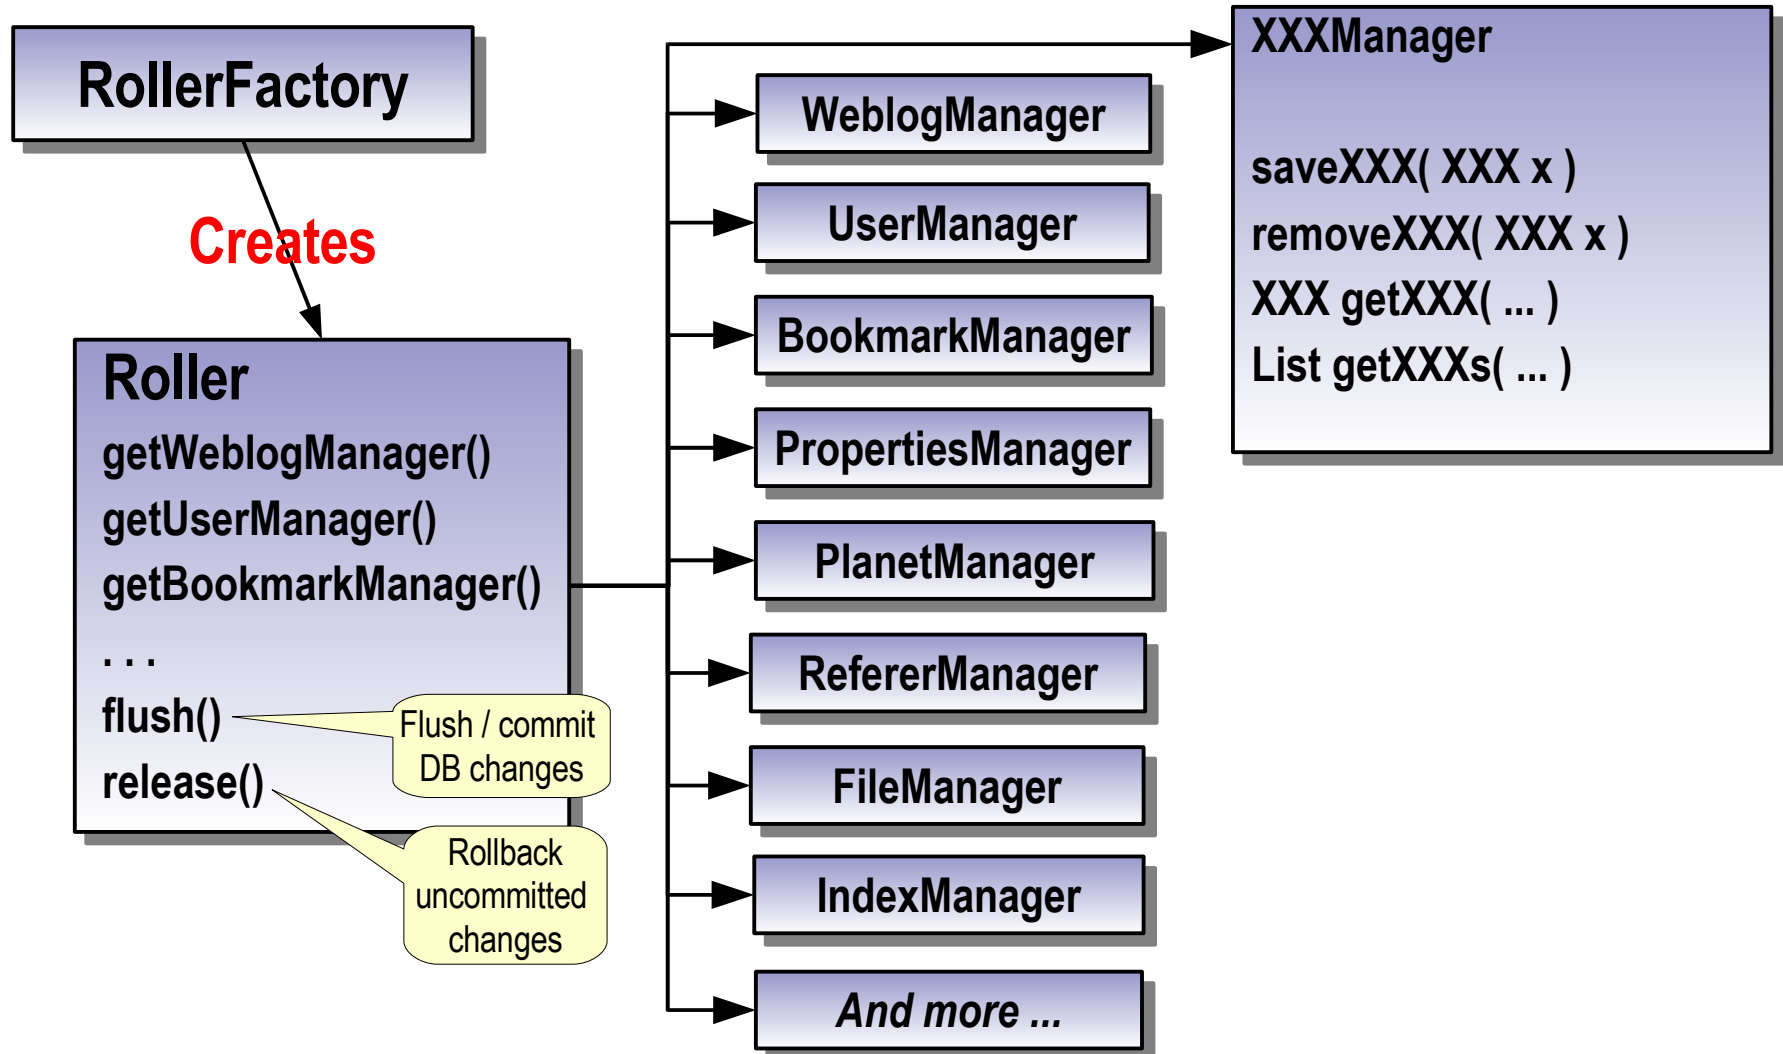

Annotations in the code are linked to callouts:

- `@hibernate.class table="website"` → Hibernate mapping generation
- `@struts.form include-all="true"` → Struts form bean generation
- `@hibernate.property column="description"` → Hibernate mapping generation
- `@roller.wrapPojoMethod type="simple"` → POJO wrapper generation

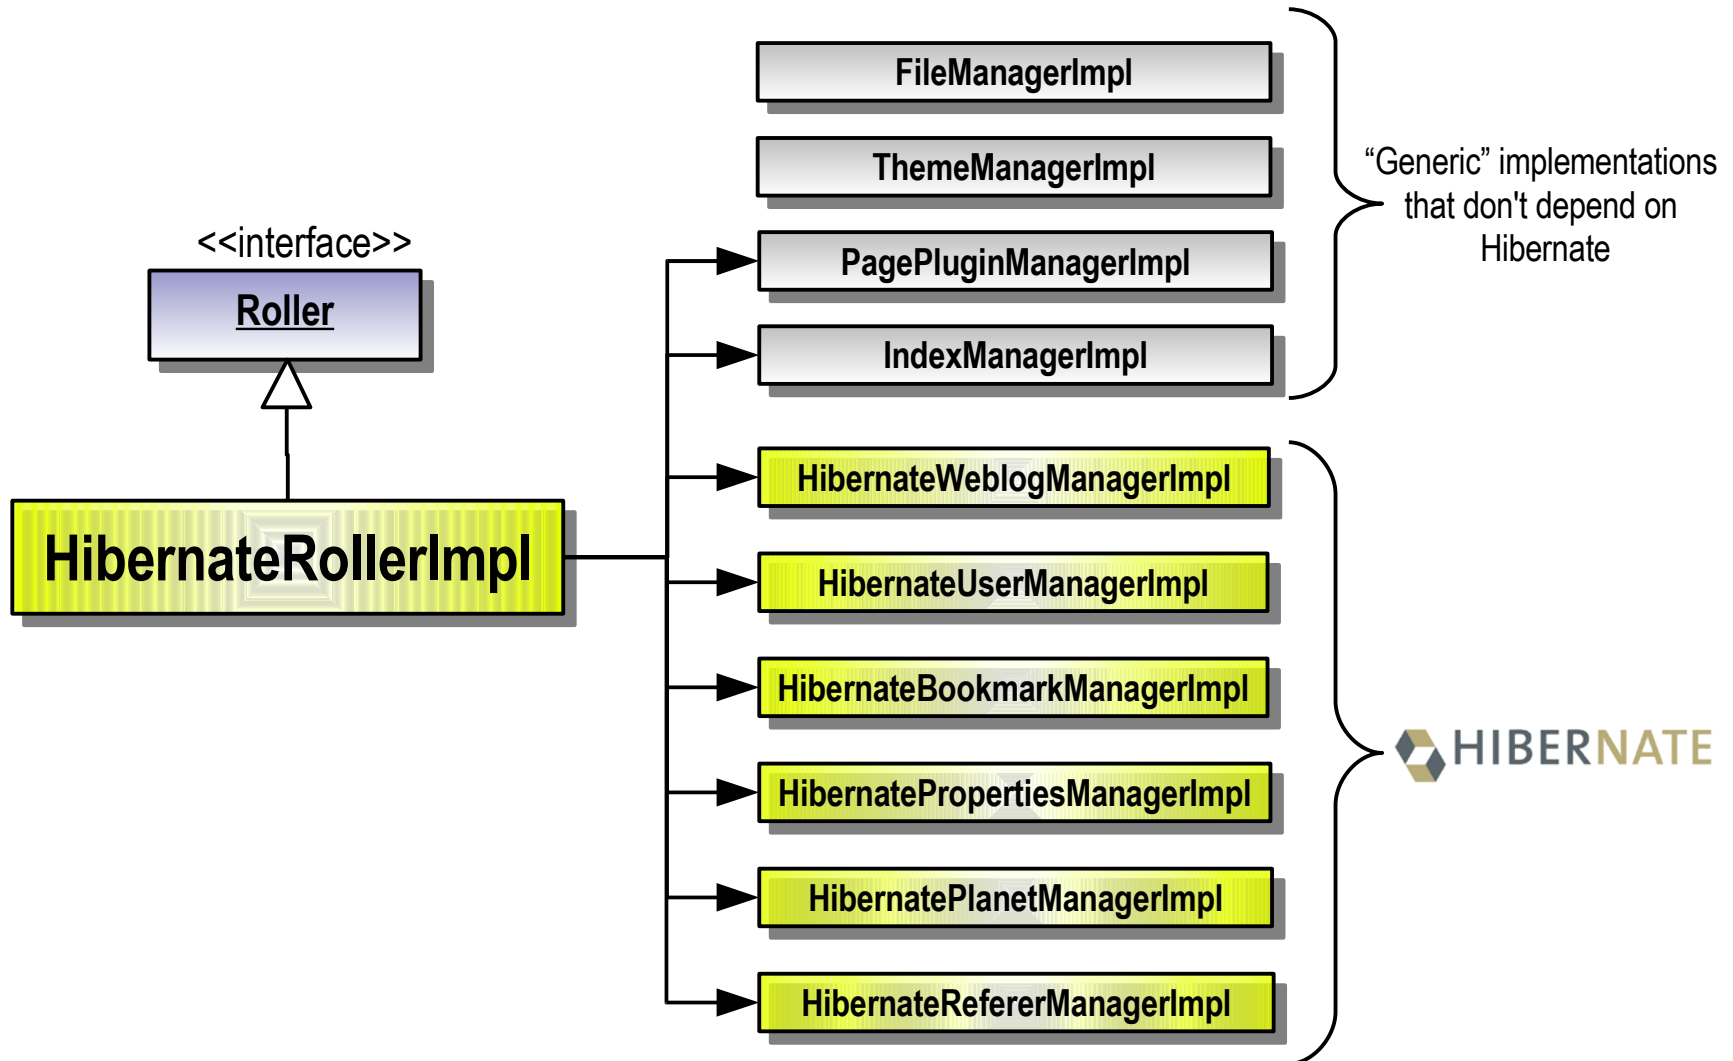

XDoclet code gen, phase 1

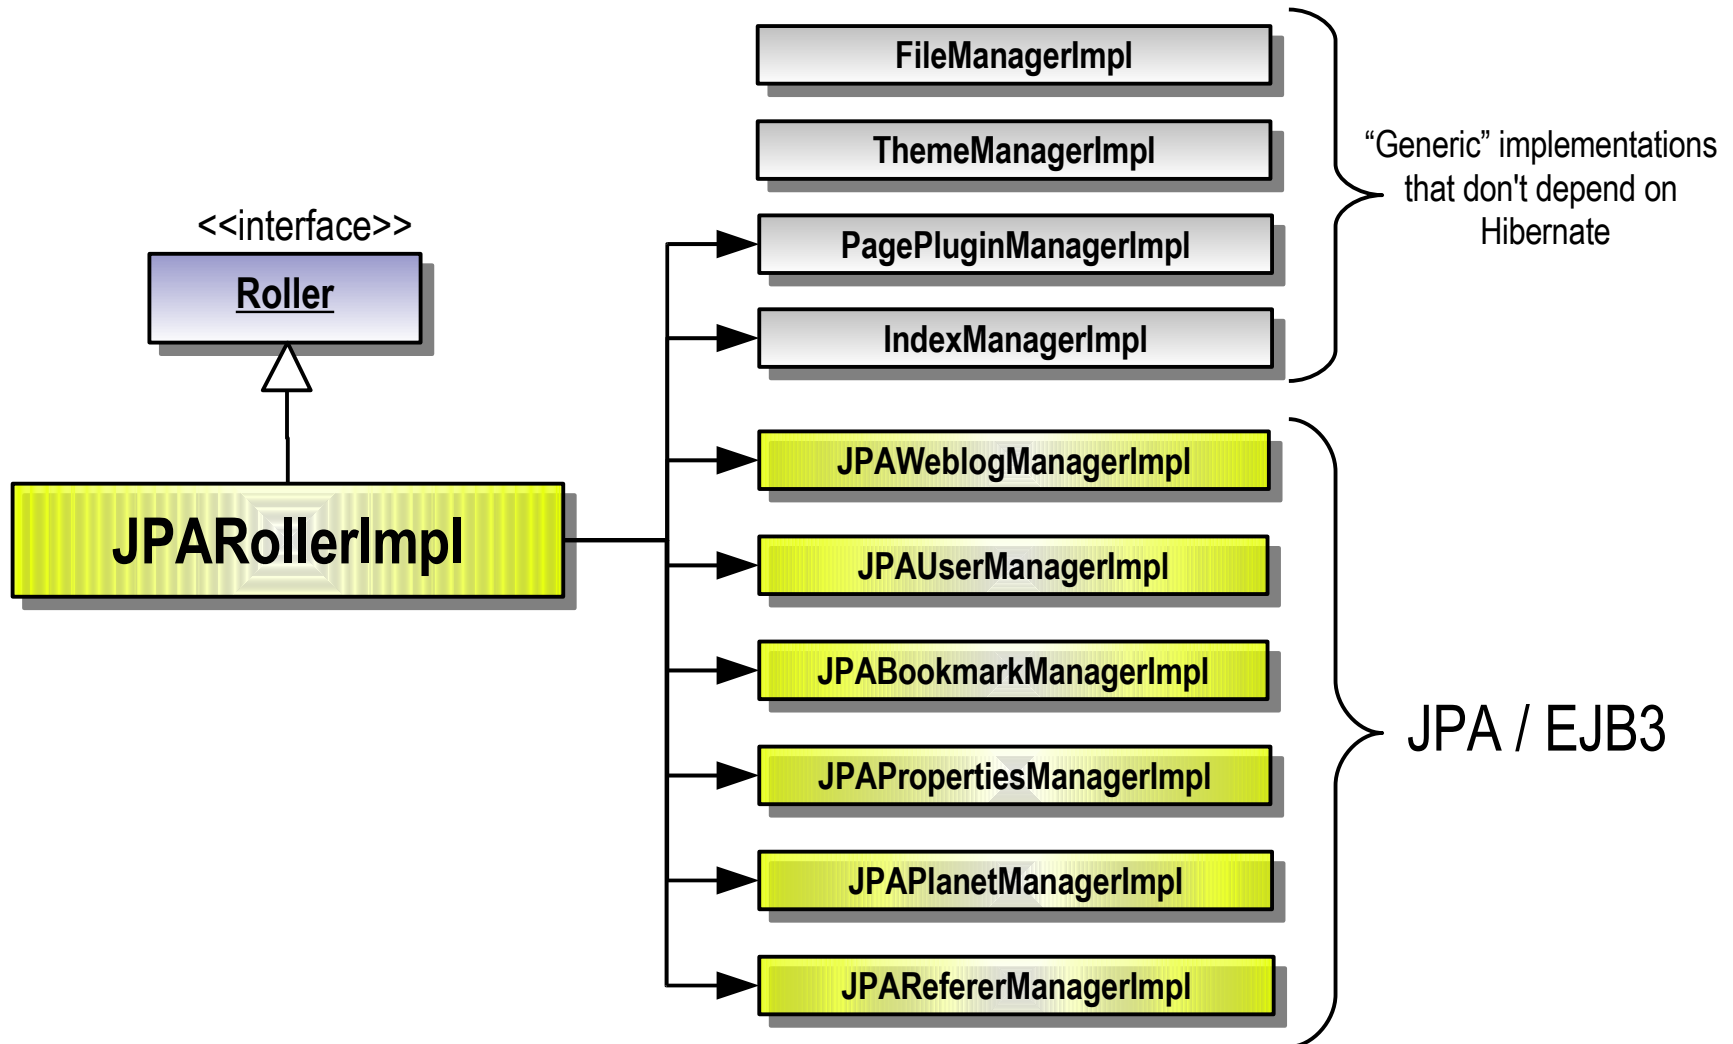

The Roller manager interfaces

The Hibernate implementation

Someday... the JPA implementation

So, for example...

```
Roller roller = RollerFactory.getRoller();
WeblogManager mgr = roller.getWeblogManager();

WeblogEntryData entry = new WeblogEntryData();

entry.setTitle("My first blog post");
entry.setText("<p>Hi everybody!<p>");
entry.setAnchor("hi_everybody");
entry.setPubTime(new Date());
entry.setUpdateTime(new Date());
entry.setWebsite(weblog);
entry.setCreator(user);
entry.setCategory(weblog.getDefaultCategory());

mgr.saveWeblogEntry(entry);
```

Agenda

- Roller history
- Roller features
- Roller community
- Roller internals: backend
- **Roller internals: frontend**
- Customizing Roller
- Roller futures

Two parts of the Roller UI

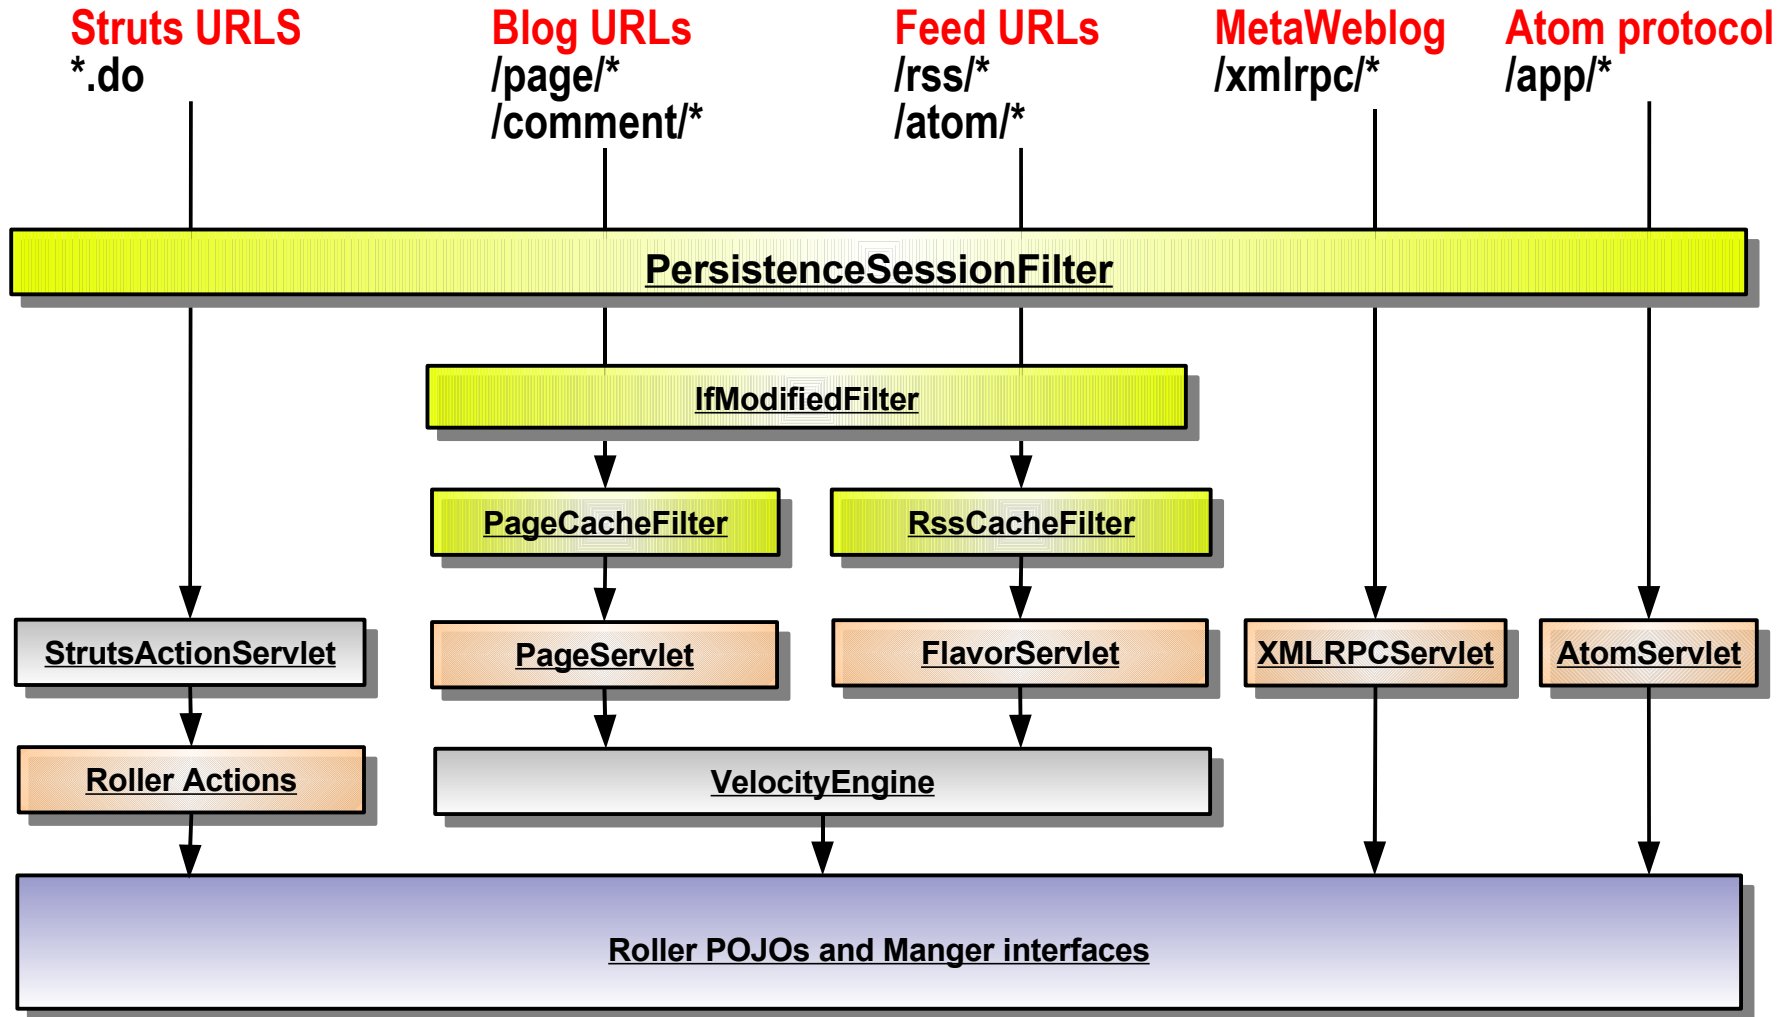

- **#1 - The blog and page rendering engine**
 - > Each blog's layout & style defined by Velocity templates
 - > Templates call Roller page models and Velocity macros
- **#2 - The authoring and admin UI**
 - > Classic Struts/Tiles and JSP user interface
- Both call Roller POJOs and manager interfaces

Open session in view

- The *Open session in view* pattern
- All requests go through `PersistenceSessionFilter`

```
Roller = RollerFactory.getRoller();  
try {  
    // Pass request into Roller request stack  
    chain.doFilter(request, response);  
}  
catch (Throwable t) {  
    // handle error  
}  
finally {  
    // rollback any uncommitted changes  
    roller.release();  
}
```

Web request stack

Struts actions markup

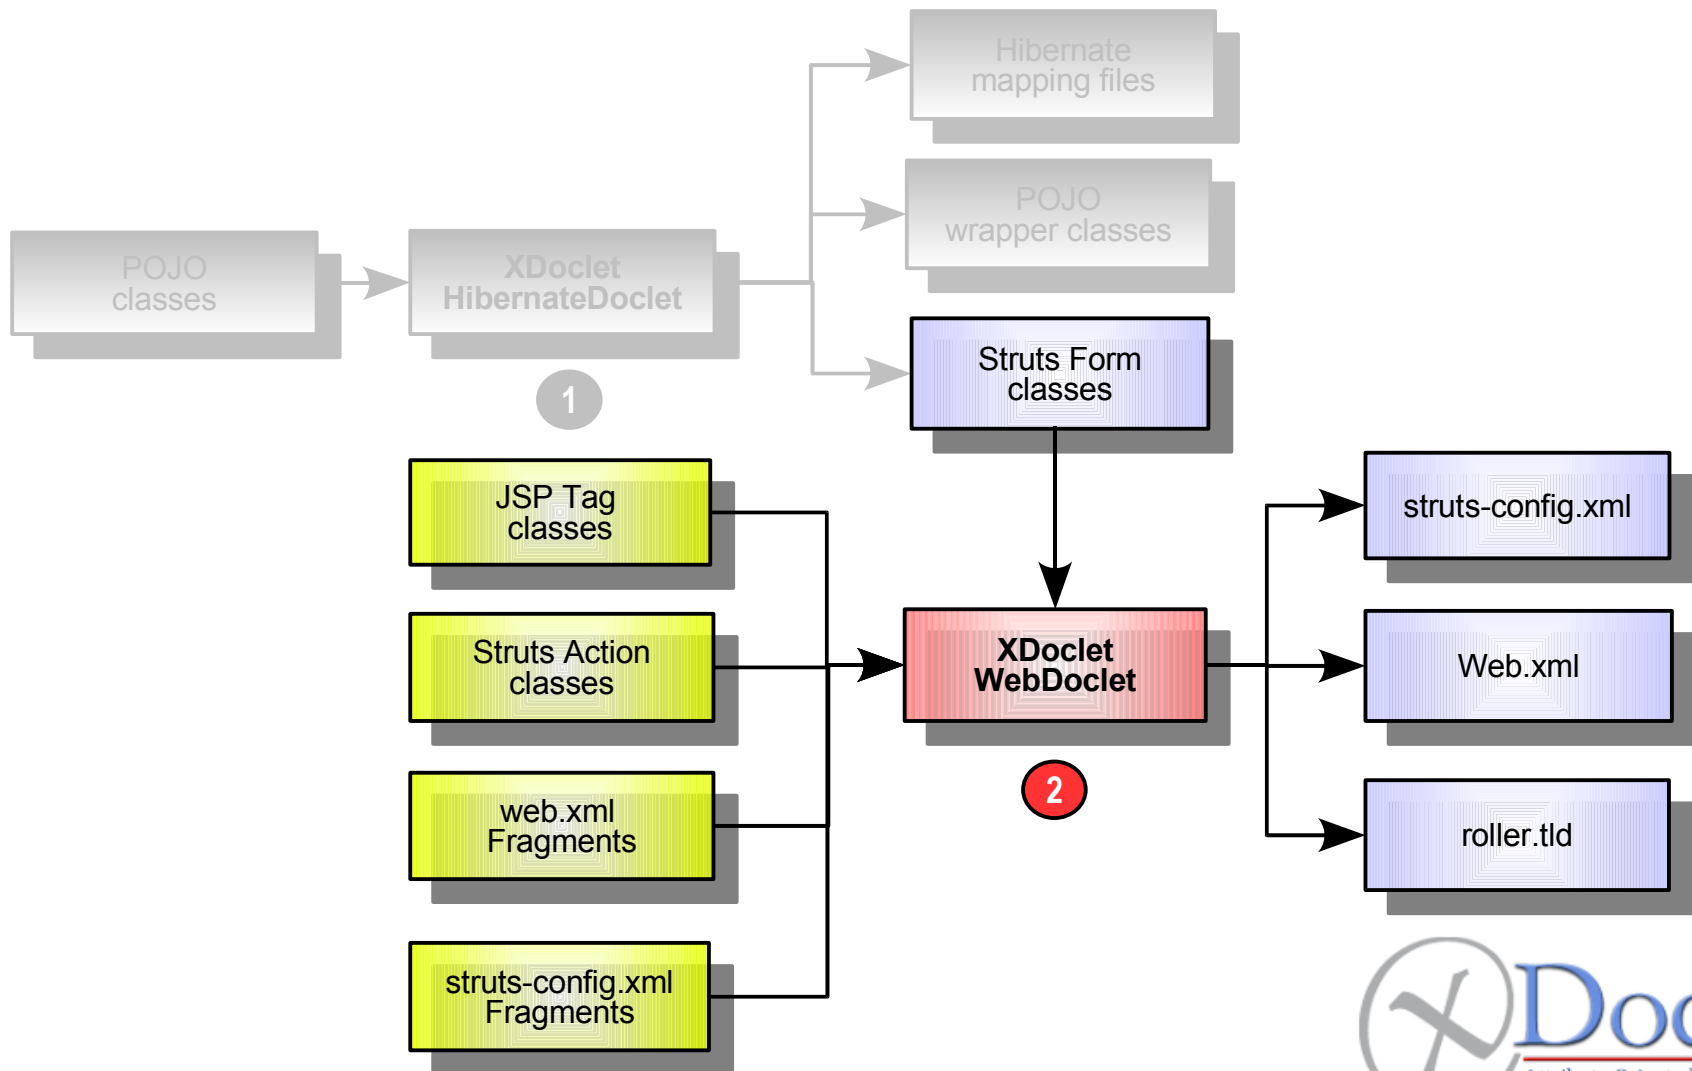

```
/**
 * @struts.action path="/BookmarkSave" name="bookmarkFormEx"
 *   validate="true" input="/BookmarkEdit.do"
 *
 * @struts.action-forward name="Bookmarks"
 *   path="/Bookmarks.do?method=selectFolder"
 */
public class BookmarkSave extends Action {

    public ActionForward execute(
        ActionMapping      mapping,
        ActionForm         actionForm,
        HttpServletRequest   req,
        HttpServletResponse res) throws Exception {

        // save a bookmark

    }
}
```

XDoclet code gen, phase 2

Blog and feed display

- Each blog defined by user-editable templates
- Feeds defined by templates too, but not editable
- Why Velocity templates?
 - > Easy to limit objects available to users
 - > Easy to store templates in a database
 - > Velocity is easy to learn

Agenda

- Roller history
- Roller features
- Roller community
- Roller internals: backend
- Roller internals: frontend
- **Customizing Roller**
- Roller futures

As an end user you can

- Add categories, bookmarks to your blog
- Customize your blog templates
- Override Roller macros
- Create your own blog themes

Page templates & macros

- Each blog can define any number of pages
- Pages can use any of > 50 different macros

displayWeblogCalendar
evaluateString
formatDate
genOpml
includePage
referrerDisplayUrl
showBasicNavBar
showBigWeblogCalendar
showBookmarks
showCommentForm
showComments
showCommentsDiv
showCommentsLink
showCommentsPageLink
showContentLanguage
showContentType
showDayPermalink
showEditorNavBar
showEntryDate
showEntryDescription

showEntryPermalink
showEntryText
showImage
showLinkbacks
showMenu
showNavBar
showNewsfeed
showOneBookmark
showOpmlLink
showPageDescription
showPageName
showPageUpdateTime
showRSSAutodiscoveryLink
showRSSBadge
showRSSLinks
showRecentEntries
showReferers
showResourceImage
showResourcePath

showSearchForm
showStatusMessage
showThemeImage
showThemeImagePath
showThemePath
showThemePath
showThemeScript
showThemeScriptPath
showThemeStyle
showThemeStyleImport
showThemeStylePath
showTrackbackURL
showVersion
showWeblogCalendar
showWeblogCategoryChooser
showWeblogEntries
showWebsiteDescription
showWebsiteTitle
spaces

Example blog page template

```
<html>
<head>
  <title>#showWebsiteTitle()</title>
  #showRSSAutodiscoveryLink()
</head>
<body>
<table border="0" align="center" width="95%"><tbody><tr>
  <td class="entries" width="80%" valign="top">
    <h1>#showWebsiteTitle()</h1>
    <p class="descrip">#showWebsiteDescription()</p>
    #showWeblogEntries("_day" 15)
  </td>
  <td class="sidebar" width="20%" valign="top">
    <h2>Calendar</h2>
    #showWeblogCalendar()<br>
    <h2>RSS Feeds</h2>
    #showRSSBadge()
    <h2>Links</h2>
    #showBookmarks("Blogroll" true false)
  </td>
</tr></tbody>
</table>
</body>
</html>
```

Without modifying Roller source

- Use Roller's web services interfaces
 - > Automate blogging via MetaWeblog or Atom protocol
 - > Automate admin via Roller Admin Protocol
- Add new Velocity page models
- Add new Weblog Entry plugins
- Plug-in your own comment authenticator
- Plug-in your own caching implementation

Agenda

- Roller history
- Roller features
- Roller community
- Roller internals: backend
- Roller internals: frontend
- Customizing Roller
- **Roller futures**

Futures: tagging

- UI for adding tags to entries
- Macros for displaying tag cloud on weblogs
- Macros for displaying site wide tag cloud
- Macros for searching via tags
- Tag-based dynamic feeds

Futures: protected weblogs

- Weblogs and weblog entries can be
 - > Shared with world
 - > Shared with all users on Roller server
 - > Shared only with members of weblog
- Comments can be allowed for
 - > Anonymous users
 - > Only users identified by OpenID
 - > Only registered users of Roller site
 - > Only members of same weblog

Futures: modular Roller

- Mix and match components
 - > Core Roller user management (required)
 - > Blog server module
 - > Planet server module
- Suite of other modules
 - > Wiki
 - > Forums
 - > Photo gallery

Conclusion

- Join the fun..
- Give Roller a try on your on server or JRoller.com
- Report bugs and RFEs to the Roller issue tracker
- Join the mailing lists and help out with development
- For more information:
 - > <http://rollerweblogger.org>

Thanks for listening!
